ENVIRONMENTAL POLICY STATEMENT		

Newton & Frost Fencing Ltd recognises the need to manage the impact that its processes and business has on the environment. We wish to continually improve our environmental performance, be more environmentally friendly, prevent pollution and develop our practices so that they may lead to environmental sustainability.

This policy statement applies to all of our company activities, and the effect that they may have on our employees, contractors, suppliers, customers, the public and the overall world environment.

In order to manage our company's environmental impacts, the following objectives have been set based upon the findings of our Preparatory Environmental Review; we shall endeavour to achieve our objectives by:

- Continually improve our environmental performance and prevent pollution by measuring and monitoring our company's impact on the environment.
- Communicating the content of our Environmental Management System to all employees of the company, any other persons who may be affected by our business and to make it available to members of the public.
- Promoting the company stance on Environmental issues, and gain accreditation to the ISO14001 standard.
- Analyse our production of waste and work towards recycling our waste in an environmentally efficient manner.
- Purchasing environmentally friendly products wherever possible by developing further our policy on purchasing, encouraging others to work in a more environmentally conscious manner.
- Implementing and maintaining a documented Environmental Management System that is audited both internally and externally on a continual basis.
- Setting further objectives as a result of Management Review findings, instructions from directors, or as required by any changes in legislation affecting our business.
- Plan our activities, services and products so that we minimise any adverse impact that we may have on the environment.
- Assessing and addressing any visual impact our business operations may have on the environment.
- Complying with the requirements of legislative environmental standards, and where possible striving to exceed those standards.
- Providing training for our employees, encouraging them to become more environmentally responsible and to work towards environmental sustainability.
- Sharing with others our environmental experiences, and the resulting solutions to overcome problems.

The objectives set above are not exhaustive; each small improvement that we make can only enhance our environment and have a positive effect on its well being. We shall review these objectives on an ongoing basis.

Ian Frost – Managing Director
